

Partnerships for A Sustainable Energy Future

Sarawak Energy is Malaysia's largest provider of renewable energy and plays a key role as the implementer of the Sarawak Government's vision and strategic initiatives in the provision of renewable, reliable and affordable energy to our communities for a sustainable energy future.

Towards this vision, we are progressing Sarawak's transition to a low-carbon economy by providing reliable, clean and affordable energy to 3 million in urban and rural areas as well as parts of Kalimantan, Indonesia.

Purposeful collaborations and synergistic partnerships are key enablers in achieving this vision. We are working with organisations and communities that advocate and share similar goals in alliances that enable the valuable exchange of knowledge, skills, research capabilities and experiences to benefit the people, the environment and the planet.

While we strive towards improving our Environmental, Social and Governance (ESG) performance in building a sustainable energy future, we continue to stay aligned with the [United Nations Sustainable Development Goals \(SDG\)](#) with a focus on SDGs 7, 8, 11, 13 and 17.

**Affordable &
Clean Energy**

**Decent Work &
Economic Growth**

**Sustainable Cities
& Communities**

Climate Action

**Partnerships for
the Goals**

Partnerships for the Goals

- All of Sarawak Energy's hydropower dams are designed and constructed following stringent guidelines by International Commission on Large Dams (ICOLD) to ensure the integrity and safety of our hydroelectric projects.
- Independent Reviews are conducted during construction, before impoundment and periodically during operations, practiced since the Batang Ai HEP was constructed in 1985.

- As a member of the International Hydropower Association (IHA), Sarawak Energy formally embeds the IHA's Hydropower Sustainability Assessment Protocol (HSAP) in its project development and operations.
- With the voluntary adoption of the HSAP guiding the responsible development of our hydropower portfolio, Sarawak Energy continues to subscribe to the sustainability agenda of maximising the benefits while minimising the social and environmental impacts of our projects.

- Sarawak Energy is the first corporation in Malaysia to commit to the "Business Ambition for 1.5°Celsius" under United Nations Global Compact.
- We are working towards voluntary climate-related financial disclosures guided by the Task Force on Climate-Related Financial Disclosures (TCFD) for better access to data in managing climate-related risks.
